

Product Guide for Hearing Professionals

INTUIS™

Easy on the ears

SIEMENS

INTUIS Easy to wear.

The INTUIS™ family of hearing solutions offers more features than any other in its class. This new product line was designed by Siemens to deliver some of the latest hearing instrument technology advancements in performance, reliability, and comfort – all at an attractive price.

INTUIS offers a complete product line, making it easy to fit all types of hearing losses. The directional Behind-the-Ear instruments include power and superpower models, and the custom family features a new, powerful Micro-CIC™. INTUIS even offers an open fit BTE – the first ever in this category. With INTUIS, there's something for everyone.

INTUIS. It's effective, reliable, and simply intuitive.

Comfort from the start.

INTUIS is an extremely comfortable hearing solution inside and out. The proven and innovative designs seen throughout the product line make it extremely easy-to-wear. Sleek, ergonomic BTE housings are tailored to the natural shape of the ear for comfortable, everyday use. For those who prefer an open ear BTE, INTUIS Life utilizes ultra-thin LifeTubes and soft, non-occluding LifeTips, for maximum cosmetic appeal and convenience.

The full line of custom models, including new, powerful Micro-CICs with optional multi-memory capabilities, proves to be the most convenient, most comfortable, and most capable hearing solutions available in its class today.

Like your clients, the INTUIS family takes cosmetic appeal very seriously. After all, hearing instruments can only work if they're worn. So in addition to the comfortable, ergonomic designs, INTUIS BTEs come in an array of colors to match a wide range of hair and skin tones, and are even available in fun colors. You may be surprised to find that the newest colors like pearl white, light pink and light blue delight your adult clients as much as pediatric ones.

With an expanded fitting range and choice of styles – even in custom models – INTUIS makes it easier for you to help your clients select the best possible solution.

Using computerized manufacturing processes, INTUIS custom models incorporate a receiver suspension, which provides shock resistance and greater reliability. Combined with new ferro fluid receivers, the receiver suspension gives greater reliability and acoustical stability.

Intuitive technology. Inside and out.

Built to last.

Today's technology is only as good as the craftsmanship of the hearing instrument. Every hearing solution must stand up to rigorous conditions like perspiration, humidity, and cerumen – natural conditions that all hearing instrument wearers experience. With INTUIS, reliability is a standard feature in every model. INTUIS is engineered for long-term performance, using advanced technological breakthroughs, as well as tried-and-true standards in dependability and quality.

INTUIS custom models are manufactured using a new proprietary process of receiver placement that ensures maximum mechanical stability.

And, that's not all... INTUIS custom instruments are available with the latest in wax protection – C-Guard™. C-Guard's technology protects by preventing cerumen, as well as moisture and other debris, from entering the receiver. C-Guard's thin, membrane-like barrier actually seals off the receiver, while remaining acoustically transparent. And besides being effective, it's much more convenient than other solutions that require frequent cleaning and changing. C-Guard is optional for all INTUIS custom models, including Micro-CIC.

All INTUIS BTEs are built with nanocoating – a housing finish pioneered exclusively by Siemens. Nanocoating actually repels perspiration, moisture, and debris to decrease the likelihood that these substances may damage the instruments – increasing reliability and ensuring long-term performance.

Ingenious. Inside.

INTUIS intelligently integrates key advances in hearing technology, making it an intuitive hearing system that effectively responds to the changing situations of everyday life. INTUIS introduces comfort technology to the basic category in all models – from Micro-CIC through BTE. From improving understanding in noise, to reducing feedback, to simplifying maintenance, INTUIS brings a new level of hearing technology to a simpler class of solutions. It's simply intuitive. It's simply INTUIS.

Directional microphone technology is the only hearing instrument technology that has been proven to improve speech understanding in noisy environments. INTUIS offers directional microphone systems in most every model, offering benefits to more of your clients. **INTUIS S Dir**, **INTUIS Dir**, and **INTUIS SP Dir**, utilize directional microphones and offer benefits for mild to profound hearing losses. What's more, the **INTUIS S Dir BTE** is so small – merging benefit with cosmetic appeal. For those who want directionality in an even more inconspicuous style, most custom models offer optional directional microphones as well.

Until now, **feedback cancellation** has often been available only in premium hearing instruments. Until INTUIS! All INTUIS models include feedback cancellation as a standard feature. Siemens feedback cancellation is so intuitive that it actually reduces or eliminates feedback without affecting sound quality. With INTUIS, wearers can comfortably enjoy the sounds around them without annoying whistling or squealing.

Siemens has integrated recent advancements in **noise reduction technology** to make INTUIS more comfortable to wear in noisy situations. Steady-state sounds like the hum of a refrigerator or air conditioner and noise from traffic are effectively reduced – instantly! Wearers can confidently and easily focus on their conversations without being distracted.

From technological features to color offerings, every detail of INTUIS was designed to outdo all other solutions in its class by offering great performance, reliability and comfort. And then some.

C-Guard wax protection is available for INTUIS custom models, and offers a level of protection not found in any other simple solution.

Talk for hours.

Telephone compatibility is a must for most hearing instrument wearers, regardless of the level of technology they seek in a hearing instrument. INTUIS S Dir, INTUIS Dir, and INTUIS SP Dir BTEs provide wearers with mild to profound hearing loss with telecoils for optimum telephone use. For maximum convenience and comfort, most INTUIS custom models offer an AutoPhone option. AutoPhone automatically engages the telecoil whenever the wearer uses a hearing instrument compatible telephone.

When the phone is moved away from the ear, the instrument automatically returns to the microphone mode and to the most recent program setting. AutoPhone can even be used with mobile and cordless phones by using a magnet accessory. It's that easy – just the way it should be.

From directional models that ensure easy understanding in noisy situations to the advanced manufacturing processes that ensure sturdy, well-fitting custom instruments, quality is built into every detail – inside and out – of every INTUIS model. All of this translates into a higher level of performance, and longer wearing time – all in a simple solution.

The ABCs of INTUIS for pediatric solutions.

Offering more than any other comparable pediatric solution: that's INTUIS, making pediatric fitting as easy as ABC. Siemens is fully committed to providing a complete program for pediatric needs. Our kid g-ear™ pediatric program includes a wide variety of products and materials to support Hearing Care Professionals, children with hearing loss, as well as their parents and caregivers. Because starting out right is important for their future.

The INTUIS family represents one piece of our vision to assist you to help children hear.

INTUIS offers more for children than any other basic solution. In fact, INTUIS Dir and INTUIS SP Dir are equipped with the necessary features for fitting infants and children with mild to profound hearing loss, at an affordable price. With a mini directional BTE, INTUIS S Dir; an open fit BTE, INTUIS Life; and a full range of custom products, the INTUIS line also offers excellent solutions for older children and teens.

Audibility: INTUIS is flexible and powerful enough when needed to meet prescriptive targets for mild through severe-profound hearing losses, ensuring audibility and comfort.

BTEs with directional microphones, audio input, noise reduction and more – INTUIS is available in colors kids love, including light pink and light blue for infants.

Comfort: INTUIS' flexible programming ensures loud sounds do not exceed targets and are below uncomfortable levels. Ergonomic designs help to ensure long-term wear.

Dependability: INTUIS BTEs are the only hearing instruments in their class with nanocoating for protection from moisture, sweat and debris. Proven BTE designs stand up to the challenge of fitting even the most active children.

Everyone: INTUIS makes great technology affordable for everyone!

FM: INTUIS Dir and INTUIS SP Dir make using FM systems easy with automatic audio shoe detection, so the child always receives the intended signal with no added effort from parents or teachers.

Intuitive software with pediatric fitting features, parent and teacher counseling materials, storybooks, accessories, staff experts for pediatric fitting and programming technical assistance, and more – Siemens offers everything you need to assist you in this important area of hearing care.

Simple to fit.

The good news doesn't stop at the comfortable design and impressive technology. Hearing solutions should be simple to fit, so INTUIS was designed with an exceptionally easy-to-use intuitive interface that supports all aspects of the fitting. The latest version of CONNEXX™ software stays true to the principle of "what you see is what you get." All programming parameters are clearly accessible with a focus on simplicity, easy and efficient navigation, and a logical workflow-based structure.

With a new interface design and an enhanced FirstFit™ flow, CONNEXX delivers powerful functionality in a clean and simple package. Its clear architecture empowers you to perform quick, successful fittings, producing satisfied clients right from the start. This means more time to devote to your clients and your business. Even if you've never used CONNEXX, you'll be surprised at how simply intuitive it is.

The latest version of CONNEXX is easier and more intuitive than ever, enabling professionals to ensure faster and better fittings for all Siemens hearing instruments.

Technology at a glance.
